Preface	page xi
Part I. Open-chain Systems	» 1
A. Keyboard and fretted instruments: open-chain enharmonic tunings, 1470-1650	» 3
A.1. Basic theory: hypotheses on the origin of scales	» 3
A.2. Basic theory: the birth of Pythagorean scales	» 5
A.3. From Pythagorean intonation to the <i>sistema partecipato</i> , later called <i>meantone</i>	» 11
A.4. Meantone enharmonic keyboards: towards fifths of a tone	» 19
A.5. Just-intonation enharmonic keyboards, 1540-1650	» 30
A.6. The problem of fretted instruments	» 39
A.7. Why enharmonic keyboards?	» 45
A.8. Conclusions	» 51
B. The revival of enharmonic keyboards: new solutions, 1760-1890	» 53
B.1. The basic approach of the new proposals	» 54
B.2. The “changeable harpsichord” of Robert Smith, 1757-58	» 56
B.3. Following in Smith’s tracks ,1768-1874	» 59
B.4. Towards perfection: organs with just intonation, 1810-90	» 66
B.5. The Pythagorean and syntonic systems reconciled, 1780-1875	» 87
B.6. ‘Schismatic’ approximations: ETS 53, 1834-80	» 96
B.7. Conclusions	» 103
C. Violin and woodwinds intonation, 1650-1900	» 107
C.1. Just (syntonic) intonation	» 108
C.2. Meantone intonation	» 123

C.3. Enharmonic fingerings for violins and woodwinds	» 134
C.4. Enharmonic microtones in compositional and performing practice	» 139
C.5. The Italian <i>maniera smorfiosa</i> of violinists and singers	» 152
C.6. Pythagorean and ‘expressive-functional’ intonation	» 157
C.7. Ensemble music and ‘tempered’ intonation	» 173
C.8. Conclusions	» 176
D. Beyond the <i>Senario</i>: the Septimal and Undecimal harmonies	» 179
D.1. Doni’s revolutionary viol consort and Ptolemaic neutral 3rds, c1633-35	» 180
D.2. The rationale of the problem: Salinas and the natural philosophers, 1577-c1700	» 186
D.3. The Enlightenment: attempts at acceptance of the 7th harmonic by some theorists and composers	» 192
D.4. The 7th harmonic in the performance of violinists and singers	» 196
D.5. The 7th harmonic in the usual unequally tempered keyboards	» 203
D.6. The 7th harmonic in the just systems: Euler’s <i>Tentamen</i> and Riccati’s rational approximation of the Equal Tempered System 31	» 210
D.7. Conclusions: the reasons for definitive exclusion	» 216
E. Doni’s polyharmonic instruments and the new music inspired by Greek theory, c1590-1650	» 221
E.1. Doni’s theoretical assumptions	» 222
E.2. The revival of ancient music, phase one: the instruments	» 227
E.3. The revival of ancient music, phase one: the compositions	» 235
E.4. Phase two: the instruments	» 238
E.5. Phase two: the compositions	» 255
E.6. Pseudo-Greek instruments and music up to the time of Doni	» 260
E.7. The Italian ‘ <i>Stylus metabolicus</i> ’, <i>alias</i> ‘Enharmonic’	» 269
E.8. Conclusions	» 275
Part II. Closed-chain Systems	» 277
F. Equal Tempered Systems: theory and practice from Vicentino to Salzinger, 1555-1721	» 279
F.1. Equal Tempered Systems and logarithms	» 279
F.2. ETS 7	» 285
F.3. ETS 12	» 287
F.4. ETS 24	» 298
F.5. ETS’s 48 and 96	» 302
F.6. ETS 19	» 303
F.7. ETS 31: Vicentino’s <i>archicembalo</i>	» 308

F.8. ETS 31: Vicentino's followers	» 325
F.9. ETS 2×31	» 341
F.10. ETS's 43 and 45	» 345
F.11. ETS's 53 and 55	» 345
F.12. ETS 136	» 351
F.13. Conclusions	» 354
G. Developments of ETS's theory in the Enlightenment	» 355
G.1. The Enlightenment theorists and binary continued fractions	» 356
G.2. Giordano Riccati and the analysis of the negative ETS's	» 364
G.3. Further considerations on analysis	» 368
G.4. Synthesis of the negative ETS's	» 373
G.5. Periodicity of the circulation of the single intervals in any ETS	» 376
G.6. The ETS's as a unit of measure: Sauveur, Leibniz, Becattelli, and Newton	» 377
G.7. <i>Excursus</i> . The problem of the division of the comma: arithmetic-type divisions vs continued fractions	» 387
H. Colonna's "Sambuca Lincea" and Stella's "Tricembalo", c1590-1640.	
Also including information on Domenichino's enharmonic instruments	» 393
H.1. The Equal Tempered System 31 and Colonna's theory of 'residuals'	» 394
H.2. The two <i>archicembali</i> : structure, tuning, and fingering	» 403
H.3. The music	» 413
H.4. The Stella-Colonna controversy	» 420
H.5. The archicembali of Domenichino, Pomar, and Falcò	» 434
I. Francesco Nigetti's "Cembalo onnicordo", c1640-1770	» 441
I.1. The 31- and 12-tone cycles in Bresciani's treatise	» 442
I.2. The final version of the "Cembalo onnicordo", according to Bresciani and Ficalbi	» 455
I.3. The first two versions, with Doni's "Cembalo pentarmonico"	» 458
I.4. Historical evidence	» 466
I.5. Documentary appendix: Doni's <i>Dichiarazione del Cembalo pentarmonico</i> , Bresciani's <i>Trattato del sistema armonico nel quale si spiega il Cembalo onnicordo</i> , and Ficalbi's <i>Descrizione del Cimbalo dalle cinque tastature</i>	» 479
J. Orazi's enharmonic flute and its music, 1797-1815	» 507
J.1. Orazi's will, 1804	» 508
J.2. The opinions of Paisiello and other composers on Orazi's flute, 1807	» 511
J.3. The instrument	» 512
J.4. The problem of 'portamento' on the flute and violin	» 518
J.5. The two enharmonic trios	» 519

J.6. Appendix 1. Some unknown experiments on the bass flute in Naples	» 528
J.7. Appendix 2. De Luca's manuscript (<i>De</i>)	» 530
J.8. Appendix 3. Orazi's two wills: archival documents	» 539
Part III. 'Deregulated' systems	» 547
K. An unusual enharmony: the Zoorgan	» 549
Works cited	» 553
Contents of the CD	» 593
Name Index	» 595
Subject Index	» 611
